COVER LETTER

Dear Hiring Manager,

I am writing to apply for an entry-level Software Engineer position. I hold a B.Tech in Information Technology from Netaji Subhas University of Technology and have gained hands-on experience through a structured internship and multiple production-focused academic projects. I am keen to contribute to a team where sound engineering practices, learning, and responsibility are valued.

During my tenure as an Associate Intern at Cosmic365, I worked on live web and e-commerce applications across international, cross-functional teams. I supported the delivery of production-ready features by translating business and product requirements into functional application components. My work included supporting Node.js backend services, monitoring performance and uptime, and contributing to REST API, manual, and functional testing. These efforts helped improve release stability and maintain high system availability. Alongside development work, I also assisted with internal IT infrastructure, resolving hardware, software, and network issues and supporting data backup and recovery activities.

I have a strong technical foundation supported by practical project work. I developed a full-stack Learning Management System using the MERN stack with secure JWT-based authentication and REST APIs. I also built a Java-based banking application with role-based access control and secure data handling, and an Android application using Java and Firebase where performance improvements reduced latency significantly. Earlier academic work included implementing multiple CPU scheduling algorithms in C++, strengthening my understanding of operating systems and efficient data structures.

I have consistently invested time in strengthening my core computer science skills. I have solved over 500 problems across platforms such as GeeksforGeeks, LeetCode, and Coding Ninjas, achieving an institute rank of 27 on GeeksforGeeks. I also completed recognised certifications in full stack web development and data structures and algorithms, reinforcing both theoretical understanding and practical application.

I am comfortable working with tools and technologies such as Java, C++, Python, JavaScript, React, Node.js, Express, SQL and NoSQL databases, Git, Docker, and basic CI/CD workflows. I approach learning with discipline and curiosity and value clear communication and accountability within a team.

I am seeking an entry-level Software Engineer, Full Stack Developer, or Backend Developer role where I can continue to grow while delivering dependable, well-structured solutions. I would welcome the opportunity to discuss how my skills and approach could add value.

Yours sincerely,
Rishabh Kaushik
